Stria

Document Migration and OCR Services

OCR and migrate documents at scale with Classification-as-a-Service

About Stria

The company is headquartered in California and provides document and data migration services for customers across the globe. Stria's Classification-as-a-Service (CaaS) solution has been used to automatically tag and route hundreds of millions of documents.

CaaS eliminates manual data entry and document uploading

Stria's CaaS solution uses a combination of artificial intelligence (AI) and human intelligence to harvest, optically character recognize (OCR), tag and route documents out of other platforms and into a content management system. CaaS is compatible with network-based file storage system, external software programs, and cloud-based solutions like DropBox, SharePoint, OneDrive, Box, FileNet, OnBase, GlobalSearch, DocuSign and more. CaaS also connects to hardware onramps like scanners, copy machines, and smartphones.

CONTENT MGMT SYSTEM

Harvest documents from network-based file storage systems, external software programs, cloud-based solutions, scanners, etc. and move that content into the core application.

OCR

Conduct OCR on documents and then use artificial intelligence (AI) augmented by Stria employees to tag documents with attribute data.

Route fully OCR'd and tagged documents into correct locations (or workflows) within the core application.

Documents are available in the core application, and within integrated applications for management, reporting, routing, and searching.

What is Included with CaaS?

- Project Manager
- Solution documentation
- Automatic harvesting, OCRing, tagging, and routing of documents into DocuSign CLM
- Advanced reporting and analytics
- 24x7 helpdesk
- Integration with other solutions (software programs, network drives, scanners, cloud systems, etc.)

Who is CaaS for?

CaaS is perfect for organizations that want to move legacy documents out of external systems and into core applications. This can be done in conjunction with a new initiative, or as a "catch up" project for a fully implemented solution. It can also be part of a longer-term system integration effort. CaaS is an ideal bridge between hardware onramps such as scanners, copy machines, smartphones, etc. Best of all, because it automatically OCRs, tags, and routes content, CaaS ensures that your staff does not get bogged down with data entry tasks.

What is the cost?
Pricing for CaaS is per document and is based on the volume of documents and the number of attribute fields.

How do I start?
Please send a note to **Migrate@Stria.com** or call **877.839.8952 x 111** and a member of Stria's team will work with you to build a plan for migrating your documents into our content management system.
